Experience

Indoqubix Cloudtech

Noida, Uttar Pradesh

Associate Software Engineer

May 2024 – June 2025

- Designed and implemented Python-based end-to-end data pipelines for seamless cross-server data integration, enabling automated Power BI report generation and timely business insights.
- Refactored SQL views and stored procedures to simplify data transformation logic, removing hard-coded values and reducing query execution time by 30%.
- Automated and streamlined ELT workflows using Google BigQuery and Cloud Data Fusion, resulting in enhanced data processing efficiency and reliability.
- Built a custom internal reporting platform with a dedicated MySQL database, integrating external APIs via Python, and automating daily data ingestion and report refreshes using Windows Task Scheduler—delivering reliable analytics for daily stand-up meetings.
- Led end-to-end implementation of the Tuva Project (healthcare), leveraging DBT for claims and clinical data pipelines and delivering actionable Power BI dashboards for key stakeholders.

DSEU University

New Delhi, Delhi

Database Engineer Intern

Apr 2024 – May 2024

- Designed, deployed, and managed a Microsoft SQL Server database for an internal university application, ensuring high availability and performance for end-users.
- Integrated and optimized back-end database infrastructure, resulting in improved application response times and uptime.

Ministry of Heavy Industries

New Delhi, Delhi

Data Analyst Intern

May 2023 – July 2023

- Cleaned, transformed, and analyzed government datasets using Python and Power BI, applying machine learning models to extract actionable business insights.
- Conducted website performance audits, pinpointing critical bottlenecks and recommending technical and security enhancements for improved speed and reliability.
- Developed an interactive Power BI dashboard to visually communicate key metrics, increasing stakeholder engagement and data-driven decision-making.

Education

Delhi Skill and Entrepreneurship University

New Delhi, Delhi

Degree, B.Sc. Data Analytics CGPA 8.2

Dec 2021 - Sept 2024

Relevant Coursework:

- Data Science & Analytics: Data Collection and Handling, Data Visualization, Time Series and Forecasting, Data Warehouse and Data Mining, Financial Literacy
- Programming & Tools: Python, Power BI, Advanced Excel, Fundamentals of Excel, Web Designing and Development
- Machine Learning & AI: Machine Learning, Advanced Machine Learning, Deep Learning, Natural Language Processing, Model Deployment and Cloud Management

- Mathematics & Statistics: Statistics, Discrete Mathematics, Mathematics
- Computer Science Fundamentals: Database Management Systems, Data Structures and Algorithms, Cyber Security, Basics of Computing

East Point School

Senior Secondary (Science Stream) Percentage 81

East Delhi, Delhi

Feb 2020 - Mar 2021

Skills & Interests

Technical

- Programming & Tools: Python, Power BI, Tableau, Excel (Advanced), Fast API, SPSS
- Data Engineering: DBT (Data Build Tool), Google BigQuery, Cloud Data Fusion, CI/CD Pipelines
- Analytics & Reporting: Storytelling with Data, Data Visualization
- Methodologies: Agile Development, Data Warehousing

Language

- English – Fluent
- Hindi – Native
- Japanese – Beginner (currently learning)

Soft Skills

- Critical Thinking, Analytical Skills, Communication Skills
- Team Collaboration, Presentation & Storytelling Skills, Time Management

Interests

- Following socio-political news and global affairs
- Researching emerging technologies and applications of Large Language Models (LLMs)

Projects

Virtual Kitchen

- Developed a user-friendly AI-driven web application that analyzes available ingredients and recommends recipes, minimizing food waste by 15% and supporting sustainable home cooking.
- Implemented meal-portion calculators to help users prepare the right quantity for any group size.

Abstract Based Text Summarization

- This project is a sub-domain of Natural Language Processing (NLP).
- Designed and deployed an NLP-based text summarization system using Python and transformer models (e.g., BERT), enabling automatic, high-quality summaries of news articles, documents, and research papers for stakeholders in media and academia.

Fearfall.Ai

- A hackathon project offers a comprehensive solution to stage fear and public speaking anxiety.
- Led development of an AI-powered platform that analyzes user presentations and automatically generates PowerPoint summaries, reducing manual workload by 15 hours per week and accelerating slide creation by 60%.
- Integrated a Q&A bot for topic-specific queries and built a community forum for user engagement and support.
